### **DETAILED ACTION**

## Specification

The disclosure is objected to because of the following informalities: The specification contains non idiomatic language. For instance, Page 2, paragraph 3, last line, "they can also can" is not clear language. Appropriate correction is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 22-27, 30-42, and 45-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of USPN 5,337,323 to Rokugawa et al or in view of JP02001347388A.

AAPA discloses (Specification pages 1-4) well known hybrid technology and describe (Specification page 2) well known pulse modulation for both temporal and permanent control. Rokugawa et al describe (BSTX 11) well known control means for both the master and slave laser elements "controlling a driving current for the slave semiconductor laser element by following the control of the driving current for the master semiconductor laser element." The use of synchronous master and slave control of AAPA hybrid systems would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because AAPA describes well known combinations of hybrid systems and pulse modulation and because

Rokugawa et al describe well known synchronized pulse modulation of plural laser sources.

JP02001347388A discloses well known laser machining comprising control means including a first triggering signal and a second triggering signal and wherein the second triggering signal has a waveform which is synchronized with the first triggering signal. The use of synchronous master and slave control of AAPA hybrid systems would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because AAPA describes well known combinations of hybrid systems and pulse modulation and because JP02001347388A describe well known synchronized pulse modulation of plural laser sources.

Claims 28 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of USPN 5,337,323 to Rokugawa et al or in view of JP02001347388A as applied to claims 22 and 37 above, and further in view of USPN 4,817,106 to Thompson. Thompson describes master and slave laser interaction and describe both antiphase and in phase operation. The operation of AAPA in synchronous mode and in antiphase or in in phase operation would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because both operations are well known operating modes which provide different waveform modes.

#### Conclusion

Page 4

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art pertains to well known synchronization of multiple lasers and multiple pulse modulations.
